

List :

Shopping-list = ["Milk", "Chocolates", "Maggie", "Orange"]

elements/items of list

Python list is collection of similar or different data types

```
shopping_list=["Milk","Chocolates","Maggie","Orange"] #Similar data type --> string
print(shopping_list[0])
print(shopping_list[1])
print(shopping_list[2])
print(shopping_list[3])

print("-----")
```

```
random=["Milk",24,True,70.45,"Azaan"] #Different data type
print(random[0])
print(random[1])
print(random[2])
print(random[3])
print(random[4])
```
