- A. age = 9 ✓
- B. 9 = age
- C. age == 9 ✗
- D. variable age 9 ✗

7. Which variable name is valid in Python?

- A. my_age ✓
- B. my age
- C. 2age
- D. my-age

8. Which rule is correct when creating a variable?

- A. A variable name can start with a number
- B. A variable name can contain spaces
- C. A variable name should not start with a number ✓
- D. Every variable must contain a symbol

9. What type of data is "Hello"?

- A. Integer
- B. String ✓
- C. Boolean
- D. Float

10. What type of data is 25?

- A. String
- B. Boolean
- C. Integer ✓
- D. Float

11. What type of data is 3.14?

- A. Integer
- B. String
- C. Float ✓
- D. Boolean

12. Which data type stores True or False?

- A. String
- B. Integer
- C. Float
- D. Boolean ✓

13. Which ~~operator~~ ^{multiplication} is used for addition?

- A. -
- B. +
- C. * ✓
- D. /

14. What is the result of this code?

`print(5 + 3)` ✓

- A. 2
- B. 8 ✓
- C. 15
- D. 53

15. What does the * operator do?

- A. Addition
- B. Division
- C. Multiplication ✓
- D. Subtraction ✓

16. What does the / operator do?

- A. Addition
- B. Division ✓
- C. Multiplication
- D. Comparison

17. Which operator is used to find the remainder?

- A. /
- B. +
- C. % ✓
- D. =

18. What does = mean when creating a variable?

`name = "Ali"` ✓

18. What does = mean when creating a variable?

name = "Ali" ←

- A. Compare two values
- B. Store a value in a variable ✓
- C. Delete a variable
- D. Print a value

✗

19. Which Python function is used to take information from the user?

- A. show()
- B. input() ✓
- C. get()
- D. write()

20. What will this program do?

name = input("What is your name? ") →

- A. It asks the user to enter their name ✓
- B. It deletes the name
- C. It prints a number
- D. It creates a game
